SUMMARY

Mobile developer with 4+ years of experience building and shipping production Flutter apps across fintech, agritech, edtech and civic tech. Strong in offline-first architecture, payment integrations and API-driven apps, with hands-on backend experience in Node.js and MySQL. Currently leading a team of nine as Assistant Head of Operations. NYSC completed and available immediately. Looking for a senior mobile developer or team lead role where I can own the technical direction of a product and grow the engineers around me.

WORK EXPERIENCE

Imperial Villa Property Development (Jos), Assistant Head of Operations **2026 – Present**

- Lead a team of nine, coordinating daily operations, task allocation and reporting to management.
- Designed and built the company's internal client records system (Node.js + MySQL) to replace a legacy hosted platform, with role-based staff access and a full audit trail.
- Automated generation of Fund Transfer Form PDFs and added pipeline tracking so management can follow each client application from start to finish.
- Led migration of client data from the legacy system and reported its gaps and risks to management.

Freelance, Mobile & Full-Stack Developer **2026 – Present**

Election Monitoring & Management System (EMMS): Field Agent mobile app

- Building the Flutter field-agent app (Android and iOS) for result entry, incident reporting and messaging across seven agent roles, from polling unit up to state level.
- Designed an offline-first flow with encrypted local storage, an idempotent sync queue and local validation of result-integrity rules before submission.
- Implemented login with SMS-based two-factor authentication and a swappable network layer so the app moves from mock data to the live API with a config change.

Wi-Fi Voucher Monetization App

- Built an app that sells Wi-Fi access: customers pay via Paystack/Flutterwave and receive voucher codes generated automatically through the TP-Link Omada Open API (OC300 controller).

Lena Africa, Mobile Developer **2025**

- Built and deployed a learning management system for schools and students, helping to bridge the digital divide.
- Worked closely with a cross-functional team to ship reliable, well-tested features quickly.

Aika, Mobile Developer **2025**

- Built a peer-to-peer parcel delivery app in two months with Flutter and Google Maps, letting senders hand parcels to travellers heading to the destination for cheaper, faster delivery than traditional couriers.

Starkpay, Founder & Mobile Developer **2023 – 2024**

- Founded a tap-to-pay startup and built its NFC payments app in Flutter.
- Launched the product and ran a partnership with the University of Jos.

Gonana, Mobile Developer **2023 – 2024**

- Built and deployed a mobile marketplace that lets farmers sell produce directly to customers, cutting out middlemen and increasing farmer profits.
- Implemented Web3-based payment functionality to improve transaction security.

FundHill, Mobile Developer **2022 – 2023**

- Built and deployed a mobile app for cash collection and data management for a small-scale financial institution.

EDUCATION & NATIONAL SERVICE

Bachelor of Science in Computer Science, University of Jos **2018 – 2023**

- Second Class Honours (Upper Division); degree conferred October 2024. Relevant coursework in software engineering and algorithms.

National Youth Service Corps (NYSC), Plateau State: completed **2025 – 2026**

Industrial Attachment (SIWES), Galaxy Backbone Nigeria **2023**

SKILLS & ADDITIONAL INFORMATION

- **Mobile:** Flutter, Dart, Android, iOS, offline-first architecture, local storage & sync, state management
- **Backend & Data:** Node.js, MySQL, Firebase, REST APIs, Postman/Swagger
- **Integrations:** Paystack, Flutterwave, NFC tap-to-pay, Web3 payments, TP-Link Omada Open API, Google Maps, SMS 2FA
- **Other:** React, Git, Figma-to-code, DNS & email configuration, AI tools
- **Languages:** English, Hausa
- **Certifications:** Networking certification (Cisco); Google Developer Student Clubs Lead
